Professional Summary

Full-stack AI Engineer with 3+ years of software engineering experience building production LLM applications, voice AI agents, and workflow automation systems. Hands-on with GPT, Gemini, and Claude integration, RAG pipelines, with a full-stack foundation in Python (FastAPI, Django) and JavaScript/TypeScript (React, Next.js, NestJS). These production AI platforms were delivered for marketing automation, sales, and customer-support clients.

Work Experience

TRON AI — Remote *Feb 2026 – Nov 2026*

- Built full-stack platforms (React/Next.js, Node.js/FastAPI) powering client automation and AI voice agent products.
- Designed and deployed n8n workflow automations integrating CRMs, calendars, and third-party APIs to replace manual client operations.
- Built and tuned voice AI agents (Retell/Twilio) for call handling, live transcription, and structured post-call data capture.

Embitronics — Onsite *Jan 2025 – Feb 2026*

- Built a full-stack platform for managing customer conversations, support tickets, and follow-ups.
- Developed React dashboards and Node.js APIs for customer data, workflows, and team activity.
- Integrated OpenAI for conversation summaries and response suggestions, with automated support workflows.

TenPixelStudios — Onsite *Oct 2023 – Dec 2024*

- Built and published cross-platform mobile applications using Flutter with offline-first SQLite data storage.
- Integrated Firebase for authentication, analytics, notifications, and cloud services.
- Implemented in-app subscriptions with RevenueCat and managed production releases, testing, and Play Store publishing.

Projects

Sales Angel: AI Voice Sales Agent Platform with Cross-Channel Memory

- Built an AI voice sales agent for Act Angel AI that calls web-form leads instantly (OTP-verified), remembers prior calls and WhatsApp chats, and hands off to WhatsApp or email mid-conversation.
- Replaced polling with per-callback job dispatch so booked callbacks fire with sub-2-second accuracy.
- Routed US calls via Retell/Twilio and India calls via Millis/Plivo for domestic-origination compliance, with English and Hindi voices.
- Added guardrails (information protection, call time limits, suspicious-conversation flagging) and a post-call reconciliation pass so no outcome is lost; built with Next.js, n8n (self-hosted), PostgreSQL, Claude/OpenAI, AWS EC2, and Vercel.

Recruitment Angel: AI Voice Recruitment Pipeline with Recruiter Admin Portal

- Built an end-to-end AI hiring pipeline for Act Angel AI that runs HR screening, interview scheduling, and a technical interview over voice calls, with recruiters making the final call in an admin portal.
- Served interview content dynamically across job tracks (Salesforce Developer, Agentforce, CSM, DevOps, and more) instead of hardcoding it per role, and scored each call on ten weighted dimensions with an AI recommendation.
- Replaced unannounced AI calls with self-service scheduling links, and added no-answer retries with escalating backoff plus a flag-a-human safety net.
- Built the admin portal (application tracking, reports, rescheduling with calendar invites) and a dual-write bridge from a legacy Salesforce org to Postgres during a live migration; Next.js, n8n, PostgreSQL, Retell, Millis, Salesforce, Twilio, AWS EC2, Vercel.

Sales Command Center: Multi-Tenant CRM Dashboard with AI Automation

- Built a multi-tenant SaaS dashboard giving local service businesses (dental, med spa, real estate) a single place to run their CRM.
- Synced live leads, conversations, and appointments from GoHighLevel, auto-tagging them hot/warm/cold and using OpenAI to flag stalled leads and no-shows with a suggested next step.
- Shipped three built-in automations covering missed-call text-back, lead qualification, and follow-up.
- Isolated each client's data in its own CRM sub-account managed from one admin view; built solo with Next.js, Supabase, GoHighLevel API, OpenAI, and cron jobs and closed deals worth $6–7K for the agency running it.

Nova: Multi-Tenant SEO Automation Platform for Healthcare Practices

- Built a multi-tenant SaaS platform running SEO end-to-end for healthcare practices, covering audits, AI content drafting, and publishing.
- Orchestrated 47 scheduled n8n workflows that pull Search Console data, draft blog/service pages with Claude against each client's brand voice, and deploy schema markup.
- Routed AI-generated drafts through human approval before publishing to WordPress, Wix, Ghost, or Squarespace.
- Provisioned each agency its own branded subdomain with isolated data from a single admin panel; built solo on Next.js, Supabase (RLS), n8n, Claude API, Airtable, and Cloudflare Workers and is live in production today.

Multi-Platform Ad Data ETL Pipeline for Kindred Society

- Built a production ETL pipeline unifying ad performance data from eight platforms: Google Ads, Meta (paid + organic), LinkedIn, Naver, Yahoo Japan, Quantcast, and StackAdapt into a single BigQuery warehouse for a performance marketing agency.
- Containerized each platform as its own Python extractor, deployed as a Cloud Run Job via Cloud Build and triggered daily by Cloud Scheduler on a timezone-aware cutoff.
- Designed idempotent loads with credentials managed through Secret Manager and deploys gated behind git tags rather than merges.

Local RAG System — Multilingual, Self-Hosted Document Q&A Platform

- Worked on a fully self-hosted RAG platform (FastAPI + Next.js, Ollama local LLMs, Qdrant vector store, PostgreSQL) for on-premises document Q&A with OCR ingestion.
- Upgraded retrieval with hybrid search and reranking, added neighbor-expansion context and LLM context capping, and tightened quality gating to filter noisy OCR chunks.
- Built a structure-aware, token-based chunking pipeline for Persian-language documents plus EN/FA speech-to-text with RTL transcription support, extending the system to multilingual use.
- Added async document indexing with live SSE progress updates, an admin-editable RAG system prompt (DB/API/UI), and auth fixes closing an anonymous-document-access gap.

TheRightContact.com (TRC LLC)

- Built a conversational AI platform answering complex contact-lens queries for optometrists and ophthalmologists over Google Sheets parameter data, PDF clinical studies, and scraped industry content (Next.js + FastAPI + PostgreSQL/Supabase on AWS, HIPAA-compliant).
- Replaced generic RAG with a custom NLP-to-spreadsheet query engine for exact lens-parameter lookups, combined with vector-based semantic search over documents.
- Implemented corneal-topography image analysis to support diagnostic insights and lens-fitting recommendations.
- Built 50+ web scrapers for continuous industry data updates, a tiered Free/Plus subscription system, and an admin dashboard (dashboard-trc.com) for content and user management.

Conflict Signal: Real-Time Global Conflict Intelligence Map

- Built a real-time global conflict intelligence map tracking military activity including incidents, verified strike trajectories, military aircraft and naval movement, and a seven-day event timeline: rendered live in-browser with no signup required.
- Designed an evidence-gated AI ingestion pipeline (n8n + GPT-4) that classifies incoming GDELT/RSS events and only creates a moving trajectory when two physical endpoints are explicitly present in the source text, rejecting contextual/diplomatic locations to keep false positives out of the map.
- Built the map engine on MapLibre GL with deck.gl layers and Supercluster for clustering, backed by Supabase PostgreSQL/PostGIS with Realtime subscriptions for live pin updates and REST RPCs for country conflict/force-posture context.
- Wrote the country intensity scoring, article enrichment (publisher attribution, licensing-gated content storage), and event-relationship repair scripts; built and shipped solo, live..

Technical Skills

AI / ML: LLM integration (OpenAI GPT, Google Gemini, Anthropic Claude), RAG pipelines, prompt engineering, vector databases and semantic search (embeddings), LangChain, voice AI (Retell, Twilio), multi-agent systems, workflow automation (n8n, make.com)

Languages: Python, JavaScript, TypeScript, SQL

Backend: FastAPI, Django, Node.js, Nest.js

Frontend: React.js, Next.js, TailwindCSS

Data & Cloud: PostgreSQL, MySQL, MongoDB, Redis, BigQuery, AWS, Docker, Kubernetes, Helm

Integrations: Gohighlevel, Hubspot, Salesforce, Stripe, Plaid, Onesignal

Education

- **FAST NUCES:** Bachelors in Computer Science — 2025

- **Languages:** English (Professional), Urdu (Native)
