Farhan Bukhari

Software Engineer with proficiency across multiple domains
BS Computer Science
National University of Computer and Emerging Sciences FAST, Lahore

Education

•Bachelors in Computer Science *2021-25*
National University of Computer and Emerging Sciences FAST, Lahore Status: Graduated

Experience

•Full Stack Mobile Developer *May 2025 – Present*
Embitronics In-Person

- Built cross-platform Flutter apps with modular widget architecture, state management (Bloc/Cubit), and reusable components.
- Developed and maintained RESTful APIs using Django and Node.js, integrating secure authentication and database operations.
- Implemented Firebase services (Auth, Firestore, Analytics) to extend app functionality and enable real-time sync.
- Applied clean architecture principles, structured routing, and CI/CD practices to deliver scalable, user-focused solutions.

•Flutter Developer *April 2024 - May 2025*
Ten Pixel Studios In-Person

- Built and optimized Flutter UIs with efficient widget trees and reusable components.
- Integrated Firebase (Auth, Firestore, Analytics) to support core app functionality.
- Ensured clean architecture, structured routing, and user-centric UI/UX design.

•AI/ML Internship *February - March 2024*
Netsol In-Person

- Understanding of different Machine Learning Models like Regression, Classification etc.
- Worked on different image generation models like DiscoDiffusion and TecoGAN.
- YOLO Object detection from a video and fine-tuning of the model.

Projects

•Retainr – Employee Retainment Platform

Developed mobile app, business admin, and super admin portals for employee retainment with drip vesting, bonus management, withdrawals, dashboard insights.

- Built a cross-platform mobile application in Flutter for employees to track vesting schedules, bonuses, and withdrawals.
- Developed Business Admin and Super Admin web portals using modern frontend frameworks with role-based access.
- Implemented backend services for drip vesting, payroll logic, and money withdrawal flows with secure API integration.
- Designed dashboards with metrics and insights for admins, enabling data-driven decision-making.

•EverAfter – Parent and Child Portal Platform

Developed mobile and web applications for parent–child account management, memory preservation, and secure account activation workflows.

- Built a Flutter mobile app where parents can create and manage child profiles, upload memory videos, and designate trusted people for account approval.
- Implemented workflows for children to claim their accounts at a specified age, with parental and trusted-user approvals.
- Enabled children to view curated memory videos upon account activation, ensuring a personalized experience.
- Developed a web portal for parents to manage child records, oversee claim requests, and handle account approvals.

•Organize Thoughts – AI-Powered Productivity App

Built a mobile application enabling users to capture, refine, and structure their ideas with AI assistance for improved productivity.

- Developed features for users to record and organize raw thoughts, transforming them into structured notes.
- Integrated AI-powered services for idea refinement, multi-thought summarization, and actionable insights generation.

– Implemented note management with tagging, categorization, and search for quick recollection.
– Designed a clean, user-friendly interface focused on productivity and ease of use.

•Living in Germany App

Built in Flutter, with Bloc/Cubit features playing questions via levels, through mock tests for the german citizenship.

– User can play level wise, jump to different questions.
– Can generate completely randomized tests, along with proper results for each attempted test.
– Bookmarks, Results Overview, Dark Mode, and more.
– Technology Used: Flutter, Firebase, Bloc/Cubit for State Management

•Interior AI Design App

Built in Flutter, uses image generation api to return a crafted interior home design photo. User can edit room type, style, make changes to the generated photo.

– User can edit room type, style, make changes to the generated photo.
– Different features like photo sharing, editing and saving to gallery.
– Technology Used: Flutter, Firebase, Bloc/Cubit for State Management

•OneTapAway – Secure Digital Vault App

Developed a mobile application for securely storing sensitive information including passwords, payment details, and confidential documents.

– Built secure storage for passwords, credit card details, and confidential documents with strong encryption.
– Implemented biometric authentication (Face ID / Touch ID) and multi-layered security for data access.
– Enabled organized document management for legal and financial records with quick retrieval features.
– Designed an intuitive interface prioritizing privacy, usability, and trustworthiness.

•YOLO Model Fine Tuning for Ant Detection

Performed on yolov8 engine and added a custom detection for Ants in a video.

– Annotations of ant images through dataset provided by DatasetNinja.
– Contained over 480 images for training and 120 images for testing.
– Technology Used: Python, Machine Learning, Deep-sort

Technical Skills and Interests

Languages & Frameworks: Dart, Flutter, Python, Django, JavaScript/TypeScript, React, Next.js, Node.js, NestJS, C/C++, SQL
Databases: MongoDB, PostgreSQL, MySQL, Firebase Firestore
Areas of Interest: Full Stack Mobile & Web Development, AI Integration, Machine Learning, MLOps, Cloud & DevOps, System Design
Soft Skills: Problem Solving, Self-Learning, Adaptability, Communication, Presentation
